Privacy, Cybersecurity & Artificial Intelligence

Organizations today face growing risks tied to their data. These include obligations around personal information; risks from threat actors seeking to steal or compromise sensitive information; and the myriad challenges arising from uses of artificial intelligence.

Anderson & Kreiger helps clients identify, manage, and respond to these risks with practical, business-focused legal counsel. Our Privacy, Cybersecurity & Artificial Intelligence Practice advises public and private sector clients on privacy compliance, cybersecurity preparedness, incident response, data governance, internal investigations, regulatory obligations, and AI-related risk management.

We work with municipalities, airports, healthcare providers, educational institutions, construction and real estate companies, financial services organizations, technology companies, nonprofits, and other businesses that collect, store, manage, or rely on sensitive information and digital systems in their daily operations.

How We Help Clients

Privacy and cybersecurity issues rarely exist in isolation. A data breach or cybersecurity incident can create legal, operational, employment, regulatory, contractual, and reputational challenges simultaneously. Likewise, organizations adopting artificial intelligence technologies must navigate evolving legal frameworks, governance expectations, data use concerns, and operational risks.

Our attorneys help clients with

- Privacy & Data Governance
- Cybersecurity & Incident Response
- Artificial Intelligence
- Litigation, Investigations & Regulatory Matters
- Business and Human Rights

Specifically, we help clients with the following:

- Developing privacy and cybersecurity policies and governance frameworks
- Data retention and deletion schedules
- Responding to ransomware attacks, data breaches, and cybersecurity incidents
- Litigating privacy and cybersecurity claims, including defending against class actions and government investigations
- Conducting internal investigations involving data misuse or technology-related issues
- Assessing AI-related legal, operational, and compliance risks
- Negotiating vendor contracts and providing data-related risk management strategies
- Addressing regulatory inquiries and enforcement matters
- Strengthening incident preparedness
- Managing privacy and cybersecurity issues during mergers, acquisitions, and business transactions
- Providing human rights due diligence and impact assessments to businesses

We focus on practical solutions that align with each client's operations, industry requirements, and long-term business objectives.

Industries We Serve

We advise clients across a broad range of industries and sectors, including:

- Municipalities and public entities
- Publicly-traded companies
- Airports and transportation organizations
- Construction and real estate companies
- Healthcare providers
- Financial services organizations and advisors
- Technology companies and startups
- Educational institutions
- Professional service firms
- Nonprofits and mission-driven organizations
- Both business-to-business and business-to-consumer companies

Whether developing privacy and cybersecurity policies, responding to a ransomware attack, conducting an internal investigation, evaluating artificial intelligence risks, or managing a regulatory inquiry, Anderson & Kreiger helps clients navigate complex data and technology challenges with practical, responsive legal counsel.
